Mandatory Chain of Identity Verification – BMS Cell and Gene Shipments

Dear All,

This memo highlights the critical importance of performing a Chain of Identity (CoI) check for all BMS Cell and Gene shipments.

For each shipment, the shipper affixes a label containing a JOIN number, which serves as the unique patient identifier. This JOIN number is also stated on the corresponding HAWB. It is essential that the JOIN number on the shipment label matches the JOIN number on the shipper and consignee HAWB. This verification must always be performed.

Conducting the Chain of Identity check at the time of collection is absolutely crucial to ensure that the correct shipment is picked up and handled, thereby safeguarding patient safety and compliance.

Please ensure that this requirement is clearly communicated and consistently reinforced with all personnel involved in handling BMS Cell and Gene shipments.

Thank you for your attention and cooperation.
Warm Regards,

Signed by:
